

Guidance

- 1. Read each question carefully before you begin answering it.
- 2. Don't spend too long on one question.
- 3. Attempt every question.
- 4. Check your answers seem right.
- 5. Always show your workings

Revision for this topic

Video 10

1. Write $x^2 + 8x + 6$ in the form $(x + a)^2 + b$, where a and b are constants.

(3)

2. Write $x^2 + 8x + 6$ in the form $(x + a)^2 + b$, where a and b are constants.

(3)

- 3. $x^2 6x 3 \equiv (x a)^2 b$, where a and b are constants
 - (a) Find the values of a and b.

a = and b =(3)

(b) Hence solve $x^2 - 6x - 3 = 0$

x = or x =(3)

4. Using completing the square, solve $x^2 - 6x + 2 = 0$

x = or x =(5)

5. Georgina rewrites the expression $x^2 + px + q$ by completing the square. He correctly obtains $(x - 5)^2 + 31$

Work out the values of p and q.

p = and q =(3)

6. Write $x^2 - 3x + 7$ in the form $(x + a)^2 + b$

.....(3)

7. Express $3x^2 + 18x - 1$ in the form $a(x + b)^2 + c$

(3)

8. Use completing the square to find the minimum point of the curve $y = x^2 - 6x + 1$

.....(4)

9. Use completing the square to find the minimum point of the curve $y = x^2 + 4x + 7$

.....(4)
